ATT: Editor of Bulletin Board Column

Dear Editor:

In the current issue of the magazine we see two requests for Vibrograf related information.

For the past 25 years we have been sending out this type of information to our customers directly when they request it from us.

In the future if you get a request for information on a Bulova, Watchmaster, Portescap, Greiner or Vibrograf machine, why don't you contact us. In most cases we can save you a lot of trouble.

Request #1 - B-200 Schematic

Enclosed is a copy of the Block schematic and circuit board layout and exchange procedure. The electronic drawings for all the types and circuit designs consist of some 30 drawings on large paper. The B-200 was designed for modular circuit exchange.

It has been our experience that when an inexperienced person tries to repair these circuits they cause more harm than good. In fact they usually double their repair cost. We suggest the simpler circuit exchange procedure or just sending the machine to us for necessary repairs.

Request #2 - AIT Booklet

booklet can be used on the A-1 - AIT or WT models

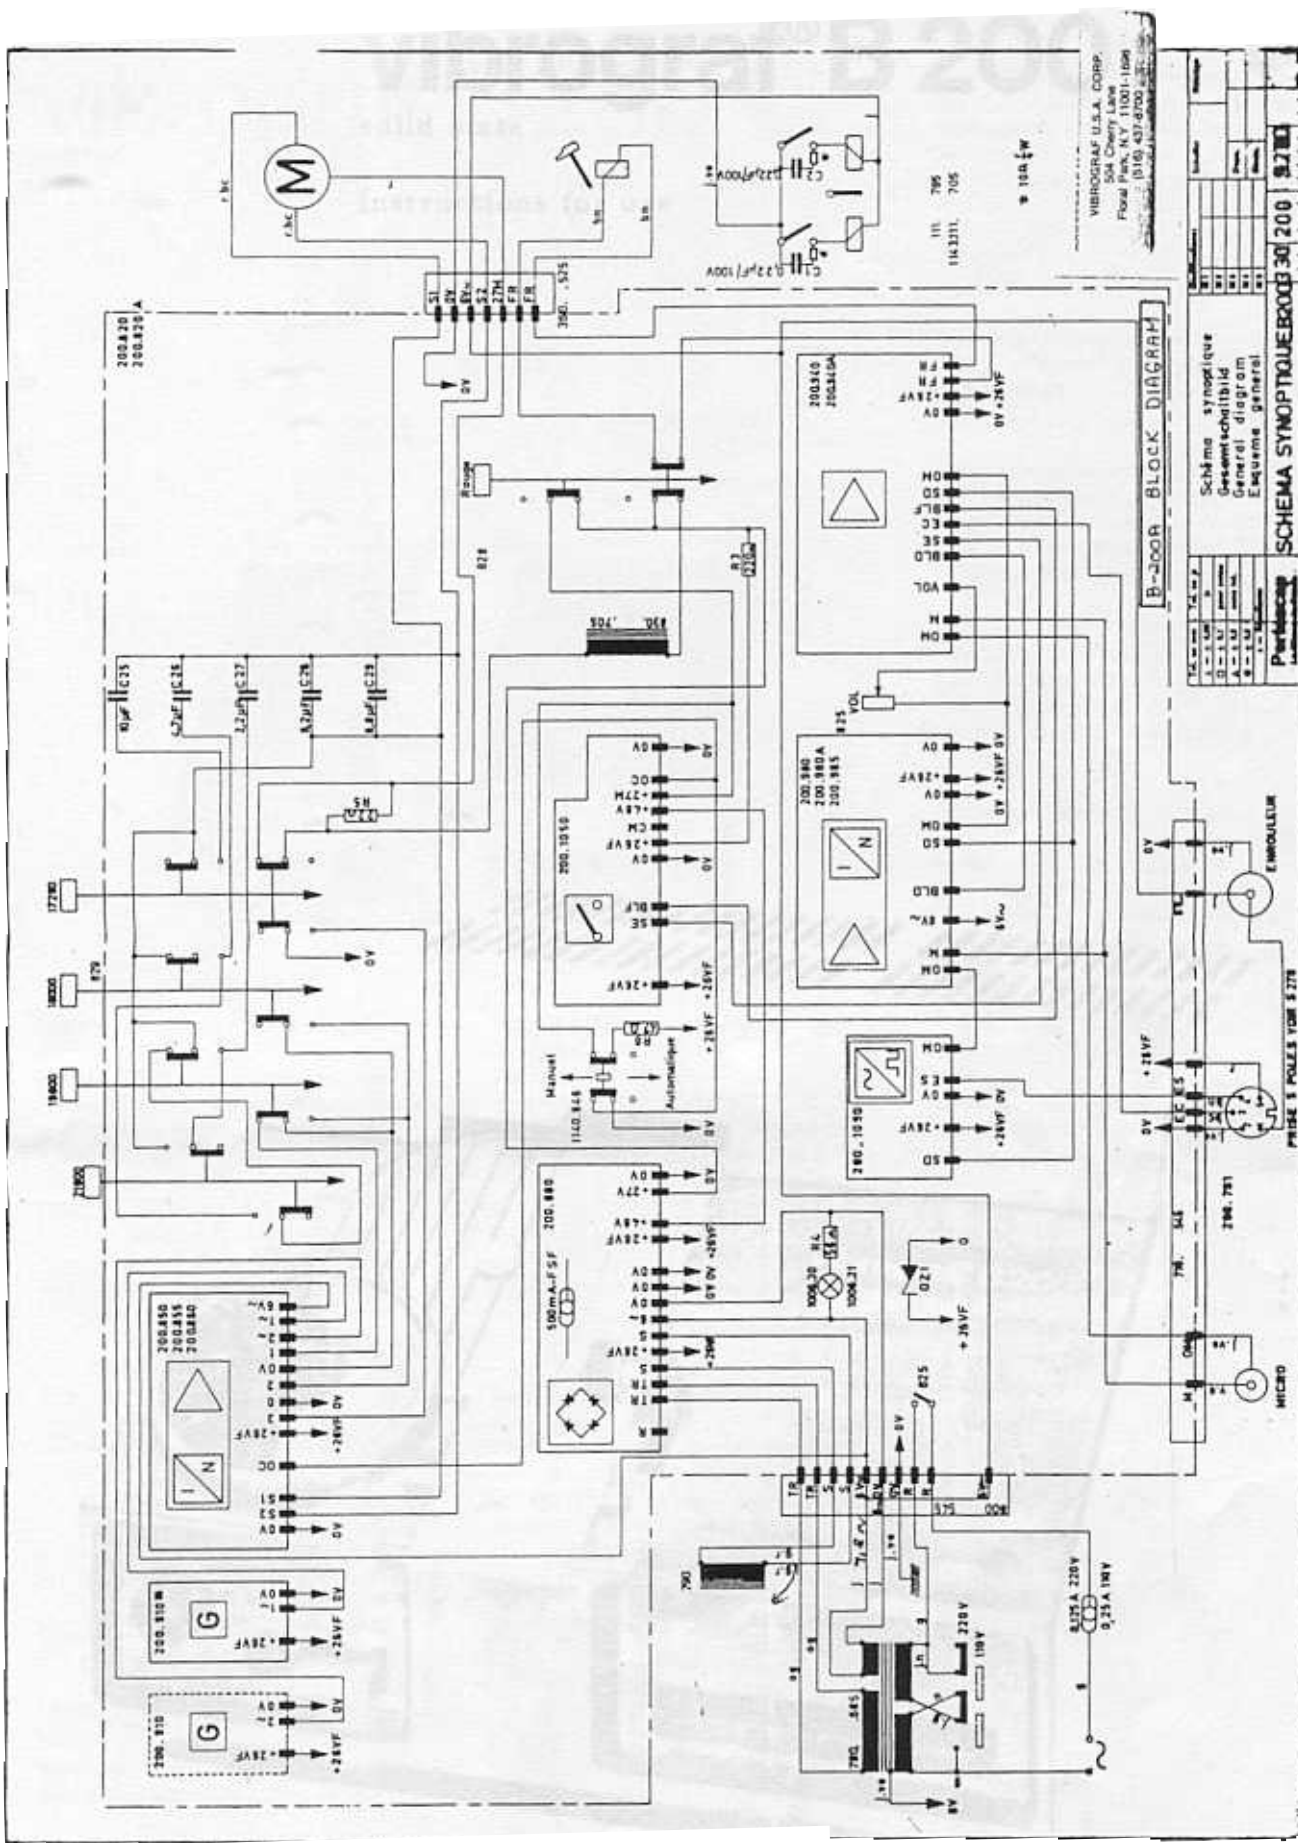

regards

Very truly yours,

John J. Hager
