## CANTOR DUST

Course/Level: NSW Secondary High School Stage 5 Mathematics - Additional Content
At every stage of iteration, the middle third of each line interval is removed. The process starts with one line segment and continues indefinitely. The Cantor dust is actually the set of line segments that are left. The diagram below illustrates the first few stages in the process.

Stage 0
Stage 1
Stage 2
Stage 3
Stage 4

1. Complete the table below.

| Stage $n$ | Number of new <br> intervals | Length of each <br> new interval | Total length of <br> new intervals | Total length <br> of all intervals |
| :---: | :---: | :---: | :---: | :---: |
| 0 | 1 | 1 | 1 | 1 |
| 1 | 2 | $\frac{1}{3}$ | $\frac{2}{3}$ | $1+\frac{2}{3}$ |
| 2 | $2^{2}$ | $\left(\frac{1}{3}\right)^{2}$ | $\left(\frac{2}{3}\right)^{2}$ | $1+\frac{2}{3}+\left(\frac{2}{3}\right)^{2}$ |
| 3 |  |  |  |  |
| 4 |  |  |  |  |
| $n$ |  |  |  |  |

2. Using the formula $1+r+r^{2}+r^{3}+\ldots+r^{n}=\frac{r^{n+1}-1}{r-1}$, find an expression for the total length of intervals at the $n$th stage of iteration.
3. Use the formula $S=1+r+r^{2}+\ldots=\frac{1}{1-r}$ (where $-1<r<1$ ), to find an expression for the total length of intervals at the $n$th stage of iteration, where $n \rightarrow \infty$.
