

PREFACE

'Mysteries Unfold', a website for those who can differentiate between 'Sacred and Secular', 'Damn and Divine'

This Website starts where Science fails...

Where Science fails?

Science is a systematize body of knowledge and that's the reason Science must always stand "true" and "truth" is GOD.

There is no difference between God and Science as most people think.

God has created the Nature, while Science is JUST exploring it.

Science is the medium to explore God's signs to mankind.

God has thus created the entire Universe in His PURE NATURE.

He has created creatures who live in water, above the water, under earth, above the earth, in the sky and above the sky. Science says that some creatures are even able to live in the rocks while other can live in fire as well.

Theologically, some creatures are made by clay while the other by laser-ray like thing or substances we are not aware of. Scientists proved that all the

elements of earth found in human body is further proof of Man being an output of clay (mud).

Muslims believe that God can create anything and Qur'an states that there exist creatures created by blazing fire (probably laser type thing or some other energetic element) named Angels and Jinns, whose material-properties are unknown to Science. (Jinn itself means 'unseen', 'foreign-element' or 'stranger'. Among the few words derived from Jinn are Ajnabi and Jannat/Jannah : something that is strange to eyes).

Here in this article wherever I will talk about "Unseen" it DOESN'T mean Jinns, Ghosts or Angels, which a reasoning mind disapproves, but something very scientific, which will stun you.

The following concept of 'Unseen' came to my mind during my scientific approach towards study and research in various religions while creating this website.

Come on lets see it now.

Well, can you simply tell me how many "Numbers" we use? (Sorry, don't be in an impression that I am a Numerologist)

Your reply will be : "From Zero to Nine"

Yes ! you are right.

Now have a look upon the progress we have done by using these TEN digits.

Check your table ... its made within measures of 0 to 9, the wall you are staring at is within the combination of zero to nine, your shirt is stitched within this 0 to 9, your wrist-watch runs in between the combination of 0 to 9, your spectacles, your contact lenses, your blood count, your white and red blood cells, your diabetes count, your degrees of sickness, your degrees of fitness, your vehicle's wheel, your mileage, your roads and milestones, the distances, your TV channels, factories, pipes, joints, books, pens, papers, calendars, centuries, years, days, dates, calories, proteins, vitamins, addition, multiplication, division, percentage, root, square root, centigrade, fathom, Celsius, the aero-plane landings , the space craft landings, the time of

pregnancies, the weights, the volumes, the density, the centimeter, the millimeter, the inches, the liters, the gallons, the watt, the amps, the hertz, the kilo bytes, the megabytes and a lot... lot.... and lot....

Your entire life depends and rotates around these “Numbers” which goes thru zero to nine (0-9). You are almost NOTHING without these SET OF COUNTS.

One more ‘set of count’ and surely not the last is the “Binary”. The ‘set of count’ on which your computer works is the greatest invention of Man that runs only on two digits, that is, ‘zero’ and ‘one’. The Binary became independent by picking ONLY two digits from the number-list going thru ‘zero’ to ‘nine’ and becomes the most powerful invention man ever produced.

By this same binary (codes which computer uses) today we are able to do anything one cannot believe or think of. Using this binary we are able to make Robots or even Clone Humans.

We have achieved all this progress just by one small ‘SET OF COUNT’ (0 to 9), which God inspired to Humans from the treasure of His infinite WISDOM. The same SET OF COUNT when came in our hands we created clone. What if the OTHER MYSTERIOUS SETS OF COUNTS unlike or like the SET OF 0 TO 9 come in our hands?

Remember, this is ONLY one small SET (zero to one) among God’s OTHER SETS, which when we got, progressed so much to feel proud of.... What if we discover or come to know about ‘OTHER SET OF COUNTS’ in which this Universe is made?

If we get these OTHER SETS or come to know about these ‘REMAINING MEASURES’ or the other DIVINE TABLETS, which are far beyond our senses, will we not be able to create Humans, or Planets or whatever you say (God forbid)?

God has introduced humans with a very very tiny SET of the CODE-LANGUAGE he used to PROGRAM the Universe. It’s same as a person who knows basic MSDOS commands lacks in production than the person who works on Windows 2000. (Unfortunately here again we are talking about two platforms, which are limited to zero to nine SET as we can’t think beyond these COUNTS).

The other SET of GOD or the other MEASURES to create ANYTHING FROM NOTHING are still away from the human sight, far beyond our senses, our sciences... and this is what UNSEEN is.

Galileo once said that the entire Universe runs on perfect Mathematics, but he probably didn't think of the other aspect, which is called UNSEEN - the energy in which the Universe is composed.

God has thus composed, designed or created all of us with such DIVINE ENERGY. The earth, the moons, the stars, the planets, the solar systems, the galaxies, the milky ways, the Universes, all of these are made within the atmosphere of an expanding Energy. And the people who SUBMIT themselves to the CREATOR of this Divine Energy are called Muslims (the submitters), while their "Submission" to this Creator is called ISLAM.

Being a Submitter a Muslim automatically becomes liable to God's 'divine laws' to live upon. He is now by DEFAULT the member of His Kingdom in which He has created everything.

Submission ('Islam' in Arabic) in other words is the required spiritual-atmosphere to merge and to be within God's created Nature down to Earth, as well as up in the skies (heavens).

A contact-prayer (Salaat or Namaaz) is thus a direct mean of communication between the Creator and His Creation.

Nobody knows what all (varieties) He has created. God alone posses the knowledge about it and that's the reason He tells us in the Holy Qur'an to 'Believe in the Unseen'. Unseen; which is not superstition, but real Science, a plain TRUTH, far beyond our five senses and all the scientific apparatus.

Yeah, human has increased the limits of his lacking senses by inventing supportive senses like telescopes and microscopes to know and catch what is far and what is within. He has also CAPTURED the laser rays, the x-rays and the ultra waves and has performed Miracles in the field of Science. Yet there are many things, say rays or waves or whatever, which are hidden from his eyes, are the UNSEEN.

Human when succeed to CATCH few of these EARTHLY Unseen, unfortunately again limited them into a zero to nine count. He because of his limited brain can't think of more than the SET he discovered. I think these

few Unseen (Laser, Alfa, beta, gamma) which human has captured might have been dissected and explored much better in some OTHER SETS or TABLETS of MEASURES of God other than OUR familiar Zero to Nine set.

I think when all these UNSEEN FORCES and SETS work together, COLLECTIVELY are called DIVINITY.

In this scientific age where we believe that there is life on Mars why don't we believe that there can be a place somewhere in the Cosmos where life exists ?

When we believe that on such a planet there can be rivers, gardens and things for pleasure, then why don't we believe if God promise you a Heaven.

If you believe that planet Earth after it's birth was a ball of gas and fire for millions of years, why don't you believe that there can be such a place to which God called Hell ?

If you believe that the fetus is non-living at a certain stage and later the life enters into it, then why do you say that there is nothing like soul?

If you believe that everything is recorded in Ether (Space), then why don't you believe that God can recall your voice and deeds from there?

If you believe that there are more than 15 billion creatures and few like mermaids were found on the Eastern Coast of many countries, why don't you believe that there can be Angels and jinns too.

If you believe that time stops in the black-holes, why don't you believe when God says that He will reward the righteous an eternal life?

If you believe that the Universe is expanding day by day, why don't you believe that as per God's promise He will allot righteous people spacious gardens which will never ends.

God knows that all these things are beyond our senses that's the reason He has just used allegory to explain them how they are.

How can one describe, for example, the taste of a chocolate to a person who never tasted chocolate? Allegory will have to be used. The person has to wait to actually taste chocolate in order to know what chocolate tastes like.

God is Just and manifest His justice, He established the system of

accountability. Those who do good will be rewarded and those who do wrong will be punished accordingly. Thus, He created Heaven and Hell and there are admission criteria for both. Muslims believe that the present life is a temporary one. It is a test, and if we pass it, we will be given a life of permanent pleasure in the company of good people in Heaven after the resurrection.

Resurrection ? Aaah, You questioned again !!

If you believe that the DELETED picture files like jpg, gif or even video-files of a person can be restored (resurrected) from the recycle bin back to normal with all the eyes and nose at its place, then why don't you believe that the God who created the entire Universe from 'nothing' is able to re-create you from the re-cycle bin (fossils) when you die? Furthermore, haven't the scientist recently produced healthy animal's body parts thru their DNAs?

In the same way when you believe that human can make computer programs and games in which he can fix the destiny (fate or qismat or HAPPENINGS) of a specific character/cartoon (for example if the ' Prince of Persia' jumps from the wall he will die...if he comes in certain area the guards will kill him, if he drinks this cup he will be charged.. and so on..) then why do we disbelieve when we talk about preordained fate?

Keeping it straight, if a human is able to fix FATE of his-own-made cartoon characters, then why don't you believe if God says that He has written His creation's destiny (programmed our life code) before designing us?

Remember, the computer-game programmer can even gifts a Free-will to his cartoons as God has gifted us, while few things still do 'move' and 'work' according to the programmer's will or decided FATE as clouds, roads, backgrounds etc.

In the same way God too has destined specific TABS of fate (mile stones of certain happenings like birth and death) in human's life, along with a Free-will and an ability to think and act (between these milestones of fate) through his own 'mind'.

You see how God produced a state-of-mind called 'free-will', then filled it in His creatures and put them on the floor (Earth) as what we do after keying a toy to see how it works.

The reason God gave 'free-will' is not something beyond imagination. If we were born without a free-will, we would have been like Angels...

DEPENDENT, working upon the tip of His remote-control, worshipping and praising Him. If God had made Angels, Its not a much wonder, but His making of Human and Gifting him a mind-of-his-own or free-will was really a wonder.

Though, scientifically, the REAL purpose of life is unknown, Theologically I think God wanted people to see and feel, night and days, waves and rays, ponds and oceans, valleys and mountains, seeds and roots, buds and fruits, taste and flavors, thorns & flowers, rainbows and butterflies, colors and dyes, sunrise and sunsets, creatures and their mates, animals and birds, gestures and words, fishes and reptiles, earth and skies, snow and flakes, waterfall and lakes, reproduction and death - the DESTINED fate, blood and relations, sex and emotions, heart and beats, hands and feet, eyes and ears, smiles and tears, tongue and voice, taste and spice, gravity and time, music and rhyme, happiness and sorrow, today and tomorrow and till the earth comes to an end. He wants the IMPARTIAL JUDGE (human - of its own mind) to judge His bounties and blessings and give the right decision looking at all His 'more than wanted' favors and thank Him with all the heart and soul and say "Indeed You are Mighty, You are Great".

Well, God is not in need of your praises though. He is Needless, but these are His SIGNS, His way, to show us and make us UNDERSTAND that there is SOMEONE up WORTH to be KNOWN.

So use your free-will to explore God's Creativity and admire it, He has never stopped you explore in any Science... He has kept all His 'toys' (creations) before you to understand them, explore them. Explore in the field of botany and look what He has engineered, explore in the field of genetics and try to trace back the origin of life, explore the earth, explore the oceans, explore the skies, explore the space.

God says in Holy Qur'an..

"O assembly of Jinns and Men, if you can penetrate regions of the heavens and the earth, then penetrate them! You cannot penetrate them without authorization." (Chapter 55, Verse 33)

In this way where God Almighty approves human's discoveries, also reminds him about his limits, because are "limits" were FATED to be "limited".

"...the knowledge given to you is very limited..." (The Holy Qur'an, Chapter

17, Verse 85)

And “FAITH” starts exactly from the very boundary where human’s scientific ‘LIMITS’ comes to an end.

In other words... “Faith starts” where “Science fails”.

This website holds the same Natural Phenomenon which will prove that God has dipped the entire Universe into the NECTAR of his PURE DIVINE infinite creativity wherein from miles to miles, planets to planets, solar systems to solar systems, galaxies to galaxies, milky ways to milky ways you can smell the ESSENCE of His existence and feel the balanced programmed LAWS upon which our UNIVERSE rotates. It will not leave you unnoticed that EVERYTHING in the Universe SUBMITS itself to Him alone ... and SUBMISSION to God alone is Islam.

Ma'salaam

Sajid Shaikh.

why science fails to explain god ?

“Professing to be wise, they became fools....”

Many had a field day about how this article was written by a Christian and all Muslims did was substitute the word

"Christian" with "Muslim" & "Bible" with "Qur'an". Yes they did and even a 7 yr old can figure that out - so what?

The moral of the story is about atheism versus God-consciousness and both Christianity and Islam fall united in the second category.

And please be reminded, this is a JOKE - a funny way of looking at the issue of atheism. Islam is more supportive of modern science than against it.

"LET ME EXPLAIN THE problem science has with God." The atheist professor of philosophy pauses before his class and then asks one of his new students to stand.

"You're a Muslim, aren't you, son?"

"Yes, sir."

"So you believe in God?"

"Absolutely."

"Is God good?"

"Sure! God's good."

"Is God all-powerful? Can God do anything?"

"Yes."

"Are you good or evil?"

"The Koran says I'm evil." (Webmaster's note: Please be aware that whoever wrote this article was probably confusing the Christian notion of the ORIGINAL sin with Islamic belief. There is no such thing as the original sin in Islam. We are born innocent. The Qur'an says that man by nature is weak and impatient but steadfastness to Islam would make him the 'noblest of all creatures' and elevate him from his weak and impatient nature. Being evil is not necessarily being weak and impatient and vice-versa.)

The professor grins knowingly. *"Ahh ! THE KORAN!"* He considers for a moment.

"Here's one for you. Let's say there's a sick person over here and you can cure him. You can do it. Would you help them? "Would you try?"

"Yes sir, I would."

"So you're good...!"

"I wouldn't say that."

"Why not say that? You would help a sick and maimed person if you could... in fact most of us would if we could... God doesn't."

[No answer.]

"He doesn't, does he? My brother was a Muslim who died of cancer even though he prayed to God to heal him. How is this God good? Hmmm? Can you answer that one?"

[No answer]

The elderly man is sympathetic.

"No, you can't, can you?" He takes a sip of water from a glass on his desk to give the student time to relax. In philosophy, you have to go easy with the new ones.

"Let's start again, young fella. - Is God good?"

"Er... Yes."

"Is Satan good?"

"No."

"Where does Satan come from?" The student falters.

"From... God..."

"That's right. God made Satan, didn't he?"

The elderly man runs his bony fingers through his thinning hair and turns to the smirking, student audience.

"I think we're going to have a lot of fun this semester, ladies and gentlemen. "He turns back to the Muslim.

"Tell me, son. Is there evil in this world?"

"Yes, sir. "

"Evil's everywhere, isn't it? Did God make everything?"

"Yes. "

"Who created evil?"

[No answer]

"Is there sickness in this world? Immorality? Hatred? Ugliness? All the terrible things - do they exist in this world? "

The student squirms on his feet. *"Yes. "*

"Who created them? "

[No answer]

The professor suddenly shouts at his student.

"WHO CREATED THEM? TELL ME, PLEASE!"

The professor closes in for the kill and climbs into the Muslim's face. In a still small voice: *"God created all evil, didn't He, son?"*

[No answer]

The student tries to hold the steady, experienced gaze and fails.

Suddenly the lecturer breaks away to pace the front of the classroom like an aging panther. The class is mesmerized.

"Tell me," he continues, "How is it that this God is good if He created all evil throughout all time?" The professor swishes his arms around to encompass the wickedness of the world. "All the hatred, the brutality, all the pain, all the torture, all the death and ugliness and all the suffering created by this good God is all over the world, isn't it, young man?"

[No answer]

"Don't you see it all over the place? Huh?" Pause. "Don't you?" The professor leans into the student's face again and whispers, "Is God good?"

[No answer]

"Do you believe in God, son?"

The student's voice betrays him and cracks. *"Yes, professor. I do."*

The old man shakes his head sadly.

"Science says you have five senses you use to identify and observe the world around you. Have you? "

"No, sir. I've never seen Him."

"Then tell us if you've ever heard your God?"

"No, sir. I have not."

"Have you ever felt your God, tasted your God or smelt your God...in fact, do you have any sensory perception of your God whatsoever?"

[No answer]

"Answer me, please."

"No, sir, I'm afraid I haven't."

"You're AFRAID... you haven't?"

"No, sir."

"Yet you still believe in him?"

"...yes..."

"That takes FAITH!" The professor smiles sagely at the underling.

"According to the rules of empirical, testable, demonstrable protocol, science says your God doesn't exist. What do you say to that, son? Where is your God now?"

[The student doesn't answer]

"Sit down, please." The Muslim sits...Defeated.

Another Muslim raises his hand.

"Professor, may I address the class?" The professor turns and smiles.

"Ah, another Muslim in the vanguard! Come, come, young man. Speak some proper wisdom to the gathering." The Muslim looks around the room.

"Some interesting points you are making, sir. Now I've got a question for you. Is there such thing as heat?"

"Yes," the professor replies. "There's heat."

"Is there such a thing as cold?"

"Yes, son, there's cold too."

"No, sir, there isn't."

The professor's grin freezes. The room suddenly goes very cold.

The second Muslim continues. "You can have lots of heat, even more heat, super-heat, mega-heat, white heat, a little heat or no heat but we don't have anything called 'cold'. We can hit 458 degrees below zero, which is no heat, but we can't go any further after that. There is no such thing as cold, otherwise we would be able to go colder than 458 - You see, sir, cold is only a word we use to describe the absence of heat. We cannot measure cold. Heat we can measure in thermal units because heat is energy. Cold is not the opposite of heat, sir, just the absence of it."

Silence. A pin drops somewhere in the classroom.

"Is there such a thing as darkness, professor?"

"That's a dumb question, son. What is night if it isn't darkness? What are you getting at...?"

"So you say there is such a thing as darkness?"

"Yes..."

"You're wrong again, sir. Darkness is not something, it is the absence of something. You can have low light, normal light, bright light, flashing light but if you have no light constantly you have nothing and it's called darkness, isn't it? That's the meaning we use to define the word. In reality, Darkness isn't. If it were, you would be able to make darkness darker and give me a jar of it. Can you...give me a jar of darker darkness, professor?" Despite himself, the professor smiles at the young effrontery before him.

This will indeed be a good semester. "Would you mind telling us what your point is, young man?"

"Yes, professor. My point is, your philosophical premise is flawed to start with and so your conclusion must be in error...."

The professor goes toxic. "Flawed...? How dare you...!"

"Sir, may I explain what I mean?" The class is all ears.

"Explain... oh, explain..." The professor makes an admirable effort to regain control. Suddenly he is affability itself. He waves his hand to silence the class, for the student to continue.

"You are working on the premise of duality," the Muslim explains. "That for example there is life and then there's death; a good God and a bad God. You are viewing the concept of God as something finite, something we can measure. Sir, science cannot even explain a thought. It uses electricity and magnetism but has never seen, much less fully understood them. To view death as the opposite of life is to be ignorant of the fact that death cannot exist as a substantive thing. Death is not the opposite of life, merely the absence of it." The young man holds up a newspaper he takes from the desk of a neighbor who has been reading it.

"Here is one of the most disgusting tabloids this country hosts, professor. Is there such a thing as immorality?"

"Of course there is, now look..."

"Wrong again, sir. You see, immorality is merely the absence of morality. Is there such thing as injustice? No. Injustice is the absence of justice. Is there such a thing as evil?" The Muslim pauses.

"Isn't evil the absence of good?" The professor's face has turned an alarming color. He is so angry he is temporarily speechless. The Muslim continues.

"If there is evil in the world, professor, and we all agree there is, then God, if he exists, must be accomplishing a work through the agency of evil. What is that work, God is accomplishing? The Koran tells us it is to see if each one of us will, of our own free will, choose good over evil." The professor bridles.

"As a philosophical scientist, I don't view this matter as having anything to do with any choice; as a realist, I absolutely do not recognize the concept of God or any other theological factor as being part of the world equation because God is not observable."

"I would have thought that the absence of God's moral code in this

world is probably one of the most observable phenomena going," the Muslim replies.

"Newspapers make billions of dollars reporting it every week! Tell me, professor. Do you teach your students that they evolved from a monkey?"

"If you are referring to the natural evolutionary process, young man, yes, of course I do."

"Have you ever observed evolution with your own eyes, sir?" The professor makes a sucking sound with his teeth and gives his student a silent, stony stare.

"Professor. Since no-one has ever observed the process of evolution at work and cannot even prove that this process is an on-going endeavor, are you not teaching your opinion, sir? Are you now not a scientist, but a priest?"

"I'll overlook your impudence in the light of our philosophical discussion. Now, have you quite finished?" the professor hisses.

"So you don't accept God's moral code to do what is righteous?"

"I believe in what is - that's science!"

"Ahh! SCIENCE!" the student's face splits into a grin.

"Sir, you rightly state that science is the study of observed phenomena. Science too is a premise which is flawed..."

"SCIENCE IS FLAWED..?" the professor splutters. The class is in uproar. The Muslim remains standing until the commotion has subsided.

"To continue the point you were making earlier to the other student, may I give you an example of what I mean?" The professor wisely keeps silent. The Muslim looks around the room.

"Is there anyone in the class who has ever seen the professor's brain?"

The class breaks out in laughter. The Muslim points towards his elderly, crumbling tutor.

"Is there anyone here who has ever heard the professor's brain... felt the professor's brain, touched or smelt the professor's brain?" No one appears to have done so. The Muslim shakes his head sadly.

"It appears no-one here has had any sensory perception of the professor's brain whatsoever. Well, according to the rules of empirical, stable, demonstrable protocol, science, I DECLARE that the professor has no brain!!"

The class is in chaos. The Muslim sits...

Because that is what a chair is for.
