

# JavaScript Arrow Function

Arrow functions allow us to write shorter function syntax:-

Example:-

```
<!DOCTYPE html>
```

```
<html>
```

```
<body>
```

```
<h1>JavaScript Functions</h1>
```

```
<h2>The Arrow Function</h2>
```

```
<p>This example shows the syntax of an Arrow Function, and how to use it.</p>
```

```
<p id="demo"></p>
```

```
<script>
```

```
let hello = "";
```

```
hello = () => {
```

```
  return "Hello World!";
```

```
}
```

```
document.getElementById("demo").innerHTML = hello();
```

```
</script>
```

```
</body>
```

```
</html>
```

Output:-

# JavaScript Functions

## The Arrow Function

This example shows the syntax of an Arrow Function, and how to use it.

Hello World!
