

jQuery Fading Methods

With jQuery you can fade an element in and out of visibility.

jQuery has the following fade methods:

- `fadeIn()`
- `fadeOut()`
- `fadeToggle()`
- `fadeTo()`

jQuery fadeIn() Method

The jQuery `fadeIn()` method is used to fade in a hidden element.

Syntax:

```
$(selector).fadeIn(speed,callback);
```

The optional speed parameter specifies the duration of the effect. It can take the following values: "slow", "fast", or milliseconds.

The optional callback parameter is a function to be executed after the fading completes.

The following example demonstrates the `fadeIn()` method with different parameters:

Example : fade.html

```
<!DOCTYPE html>

<html>
<head>
<script src="https://ajax.googleapis.com/ajax/libs/jquery/3.6.4/jquery.min.js"></script>
<script>
$(document).ready(function(){
```

```
$(“button”).click(function()
{
    $("#div1").fadeIn();
    $("#div2").fadeIn("slow");
    $("#div3").fadeIn(3000);
}
);
});

</script>
</head>
<body>

<p>Demonstrate fadeIn() with different parameters.</p>

<button>Click to fade in boxes</button><br><br>

<div id="div1" style="width:80px;height:80px;display:none;background-color:red;"></div><br>
<div id="div2" style="width:80px;height:80px;display:none;background-color:green;"></div><br>
<div id="div3" style="width:80px;height:80px;display:none;background-color:blue;"></div>

</body>
</html>
```

Output:-

Demonstrate fadeIn() with different parameters.

Click to fade in boxes

jQuery fadeOut() Method

The jQuery `fadeOut()` method is used to fade out a visible element.

Syntax:

```
$(selector).fadeOut(speed,callback);
```

The optional speed parameter specifies the duration of the effect. It can take the following values: "slow", "fast", or milliseconds.

The optional callback parameter is a function to be executed after the fading completes.

The following example demonstrates the `fadeOut()` method with different parameters:

Example:-

`fadeout.html :-`

```
<!DOCTYPE html>

<html>
<head>
<script src="https://ajax.googleapis.com/ajax/libs/jquery/3.6.4/jquery.min.js"></script>
<script>
$(document).ready(function(){
    $("button").click(function(){
        $("#div1").fadeOut();
        $("#div2").fadeOut("slow");
        $("#div3").fadeOut(3000);
    });
});
</script>
</head>
<body>

<p>Demonstrate fadeOut() with different parameters.</p>

<button>Click to fade out boxes</button><br><br>

<div id="div1" style="width:80px;height:80px;background-color:red;"></div><br>
<div id="div2" style="width:80px;height:80px;background-color:green;"></div><br>
```

```
<div id="div3" style="width:80px;height:80px;background-color:blue;"></div>

</body>

</html>
```

Demonstrate fadeOut() with different parameters.

Click to fade out boxes

jQuery fadeToggle() Method

The jQuery `fadeToggle()` method toggles between the `fadeIn()` and `fadeOut()` methods.

If the elements are faded out, `fadeToggle()` will fade them in.

If the elements are faded in, `fadeToggle()` will fade them out.

Syntax:

```
$(selector).fadeToggle(speed,callback);
```

The optional speed parameter specifies the duration of the effect. It can take the following values: "slow", "fast", or milliseconds.

The optional callback parameter is a function to be executed after the fading completes.

The following example demonstrates the `fadeToggle()` method with different parameters:

```
<!DOCTYPE html>

<html>
  <head>
    <script src="https://ajax.googleapis.com/ajax/libs/jquery/3.6.4/jquery.min.js"></script>
    <script>
      $(document).ready(function(){
        $("button").click(function(){
          $("#div1").fadeToggle();
          $("#div2").fadeToggle("slow");
          $("#div3").fadeToggle(3000);
        });
      });
    </script>
  </head>
  <body>

    <p>Demonstrate fadeToggle() with different speed parameters.</p>
```

```
<button>Click to fade in/out boxes</button><br><br>

<div id="div1" style="width:80px;height:80px;background-color:red;"></div>
<br>
<div id="div2" style="width:80px;height:80px;background-color:green;"></div>
<br>
<div id="div3" style="width:80px;height:80px;background-color:blue;"></div>

</body>
</html>
```

Output:-

Demonstrate fadeToggle() with different speed parameters.

Click to fade in/out boxes

The image shows three colored squares (red, green, and blue) arranged vertically. Each square has a faint shadow below it, indicating depth. The red square is at the top, followed by the green square, and then the blue square at the bottom. To the left of the squares is a button labeled "Click to fade in/out boxes". Above the button, there is a descriptive text: "Demonstrate fadeToggle() with different speed parameters."

jQuery fadeTo() Method

The jQuery `fadeTo()` method allows fading to a given opacity (value between 0 and 1).

Syntax:

```
$(selector).fadeTo(speed,opacity,callback);
```

The required speed parameter specifies the duration of the effect. It can take the following values: "slow", "fast", or milliseconds.

The required opacity parameter in the `fadeTo()` method specifies fading to a given opacity (value between 0 and 1).

The optional callback parameter is a function to be executed after the function completes.

The following example demonstrates the `fadeTo()` method with different parameters:

```
<!DOCTYPE html>

<html>
<head>
<script src="https://ajax.googleapis.com/ajax/libs/jquery/3.6.4/jquery.min.js"></script>
<script>
$(document).ready(function(){
    $("button").click(function(){
        $("#div1").fadeTo("slow", 0.15);
        $("#div2").fadeTo("slow", 0.4);
        $("#div3").fadeTo("slow", 0.7);
    });
});
```

```
</head>

<body>

<p>Demonstrate fadeTo() with different parameters.</p>

<button>Click to fade boxes</button><br><br>

<div id="div1" style="width:80px;height:80px;background-color:red;"></div><br>
<div id="div2" style="width:80px;height:80px;background-color:green;"></div><br>
<div id="div3" style="width:80px;height:80px;background-color:blue;"></div>

</body>

</html>
```

Output:-
