Difference Between Intraday & Delivery

There are two ways in which one can trade in the stock market.

One of these is intraday trading.

Intraday Trading :- This means you can buy/sell stocks on the same day, i.e., intraday, during the trading hours specified by the stock exchange. This way, you buy shares when the price is low and sell when their prices are high. You are benefiting from the movement of price. This is intraday trading.

Delivery Trading:-

Then, what is delivery that you keep hearing about? It means, you buy shares and hold them overnight and take delivery of them, then the

stocks get reflected in your Demat account. You can sell them whenever you want. When you take up delivery trading, you are likely to be someone who is more interested in investment opportunities rather than only trading. As an investor, you tend to think more long-term.

Types of Trading Under Delivery Trading :-

Swing trading is focused on short to medium-term price movements, and trades are typically held for a few days to a few weeks.

In contrast,

Position trading has a longer-term perspective, with positions that can be held for months or even years
