

CHEMISTRY CARTOONS!

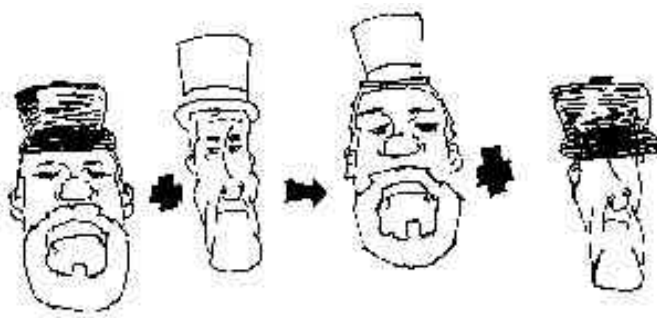

In this activity, you will create a cartoon for each of the four main types of chemical reactions. Start by dividing your paper into four quadrants with a line down the middle of the page from top to bottom and another from left to right. Create a title for each quadrant - one for each of the four types of reactions...

Synthesis
Decomposition
Single-Replacement
Double-Replacement

For each one, you will design a cartoon that represents the process pattern we see in that chemical reaction. For example, I might create a cartoon for **SYNTHESIS** that shows the following...

... Or I could create a **DOUBLE-REPLACEMENT** cartoon like this...

Just remember... be creative... make it neat & colorful... and have fun!
