

## Django Image display example :-

First of all create **static** folder inside your app folder (employee) as shown below:-

Inside **static** folder save image file pineapple.jpg as shown below :-

And now open your **index.html** file under templates folder :-

name	view
< Local Disk (D:) > crudexample > employee > templates	
Name	Date mo
 add	10/27/20
 index	10/29/20
 update	10/28/20

## Modify the Template

Now you have a image in the `static` folder. The next step will be to include this image in a HTML template:

Open the HTML file and add the following:

```
{% load static %}  

```

And write code `of index.html` file as shown below:-

```
<html>  
<head>  
{% load static %}  
</head>  
<body>  
<h1>Members</h1>  
  
</body>  
</html>
```

Restart the server for the changes to take effect:

```
py manage.py runserver
```

```
C:\Users\software>d:  
D:\>cd crudexample  
D:\crudexample>py manage.py runserver
```

In output:-

Restart the server for the changes to take effect:

```
py manage.py runserver
```
