

Start your xampp

And after it open `localhost/phpmyadmin` in your browser

Step 1:- create table record as shown below .

Run SQL query/queries on server "127.0.0.1": 

```
1 Create table record
2 (id int,
3 name varchar(20),
4 email varchar(20),
5 password varchar(20)
6 );
7 |
```

Step 2:-

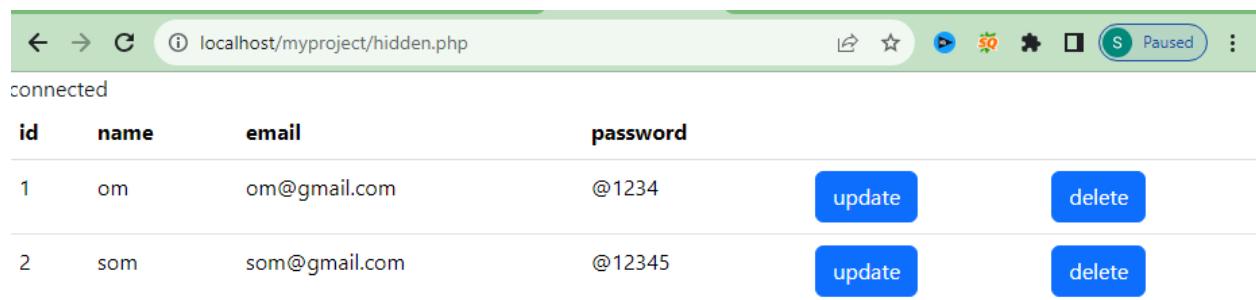

Insert record with following insert sql command

```
insert into record (id,name,email,password)values('1','om','om@gmail.com','@1234');
```

```
insert into record (id,name,email,password)values('2','som','som@gmail.com','@12345');
```

Step 3:-

Now we want to create following type output two button update and delete with **hidden elements** which hold **id** value .

id	name	email	password		
1	om	om@gmail.com	@1234	update	delete
2	som	som@gmail.com	@12345	update	delete

For above we will write code as shown below

```

<!doctype html>
<html lang="en">
  <head>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1">
    <title>Bootstrap demo</title>
    <link
      href="https://cdn.jsdelivr.net/npm/bootstrap@5.3.2/dist/css/bootstrap.min.css"
      rel="stylesheet" integrity="sha384-T3c6CoIi6uLrA9TneNEoa7RxnatzjcDSCmG1MXxSR1GAsXEV/Dwwykc2MPK8M2HN"
      crossorigin="anonymous">
  </head>
  <body>

<?php
include('connect.php'); //database connectivity
$sql = "select * from record"; //select all record from table hideen
$result = mysqli_query($conn,$sql); //exeute sql
echo '<table class="table">
<tr>
<th>id</th><th>name</th><th>email</th><th>password</th><th>&ampnbsp</th><th>&ampnbsp</th></tr><
tr>';
while($row=mysqli_fetch_array($result)) //reading table record using

{
echo '<tr>';
echo '<td>';
echo $row['id']; //display id value from column id
echo '</td>';
echo '<td>';
echo $row['name']; //display name value from column name
echo '</td>';
echo '<td>';
echo $row["email"]; //display email value from column email
echo '</td>';
echo '<td>';
echo $row["password"]; //display password value from column password
echo '</td>';
/* start of update hidden*/
echo '<td> <form action="update.php" method="post">

<input type="hidden" name="hidden" value="'.$row['id'].'">
<input type="submit" name="button" value="update" class="btn btn-primary">
```

```
</form></td>';

/* end of update hidden */

/* start of delete hidden */
echo '<td> <form action="delete.php" method="post">

<input type="hidden" name="hidden" value="'. $row['id'] .'>

<input type="submit" name="button" value="delete" class="btn btn-primary">
</form></td>';
/* end of delete hidden */

echo'</tr>';
}
echo'</table>';
?>
</body>
</html>
```

And after it run it and after this we will create **update.php** file code to display record in form as shown below

The screenshot shows a web browser window with the URL `localhost/myproject/update.php`. The page displays a form for updating a record. The fields are as follows:

- connected**: A status message.
- id**: An input field containing the value `1`.
- Name**: An input field containing the value `om`.
- email**: An input field containing the value `om@gmail.com`.
- password**: An input field containing the value `@1234`.

At the bottom left of the form is a blue button labeled **update**.

For this we write code for `update.php` file :-

```
<!doctype html>
<html lang="en">
  <head>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1">
    <title>Bootstrap demo</title>
    <link
      href="https://cdn.jsdelivr.net/npm/bootstrap@5.3.2/dist/css/bootstrap.min.css"
      rel="stylesheet" integrity="sha384-T3c6CoIi6uLrA9TneNEoa7RxnatzjcDSCmG1MXxSR1GAsXEV/Dwwykc2MPK8M2HN"
      crossorigin="anonymous">
  </head>
  <body>

  <?php
  $hiddenid=$_POST["hidden"]; //getting id from hidden element from display.php

  include('connect.php'); //database connection

  $sql = "select * from record where id='$hiddenid'"; //matching record of hidden
  id with record table id
```

```

$result = mysqli_query($conn,$sql);

while($row=mysqli_fetch_array($result))

{
echo '<form action="finalupdate.php" method="post">

id <input type="text" name="id" value="'. $row['id'] .'"    class="form-control">

Name <input type="text" name="name" value="'. $row['name'] .'"    class="form-control">

email <input type="text" name="email" value="'. $row['email'] .'"    class="form-control">

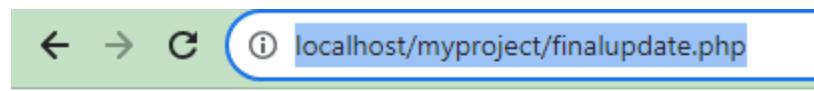

password<input type="text" name="password"
value="'. $row['password'] .'"    class="form-control">

<input type="hidden" name="hidden" value="'. $row['id'] .'>

<input type="submit" value="update" name="update" class="btn btn-primary">
</form>';
}
?>
</body>
</html>

```

finalupdate.php file code :-

connected record updated successfully

Code for **finalupdate.php** file :-

```

<?php
$hiddenid=$_POST["hidden"]; //getting id from hidden element from update.php

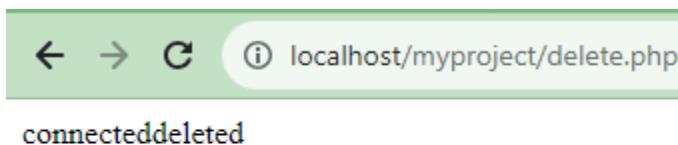

```

```

$name=$_POST["name"];
$email=$_POST["email"];
$password=$_POST["password"];
include('connect.php');
$sql="update record set name='$name', email='$email',password='$password' where
id='$hiddenid'";
$res=mysqli_query($conn,$sql);
if($res)
{
echo"record updated successfully";
}
else
{
echo "record not updated";
}
?>

```

Now for delete record

delete.php file code :-

```

<?php
include('connect.php'); //it ll include all code of connect.php
$hiddenid=$_POST['hidden']; // value from display.php
$sql="delete from record where id='$hiddenid'";
$res=mysqli_query($conn,$sql); //go and execute delete sql command
if ($res)
{
echo "deleted";
}
else

```

```
{  
echo "not deleted";  
}  
?>
```
