

How to create database in localhost/phpmyadmin ?

Step 1:-

Start your apache and mysql server as shown below

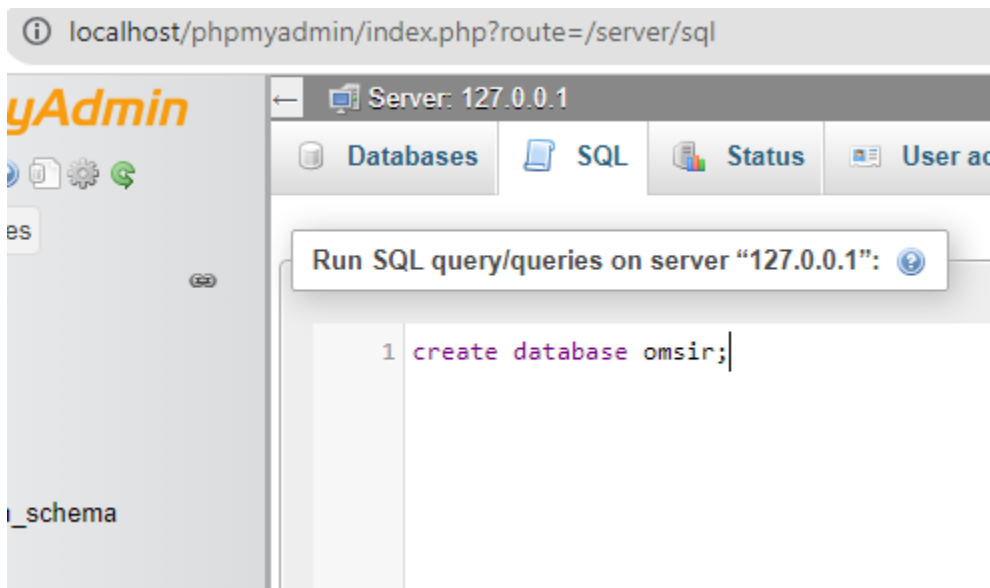

Step 2:-

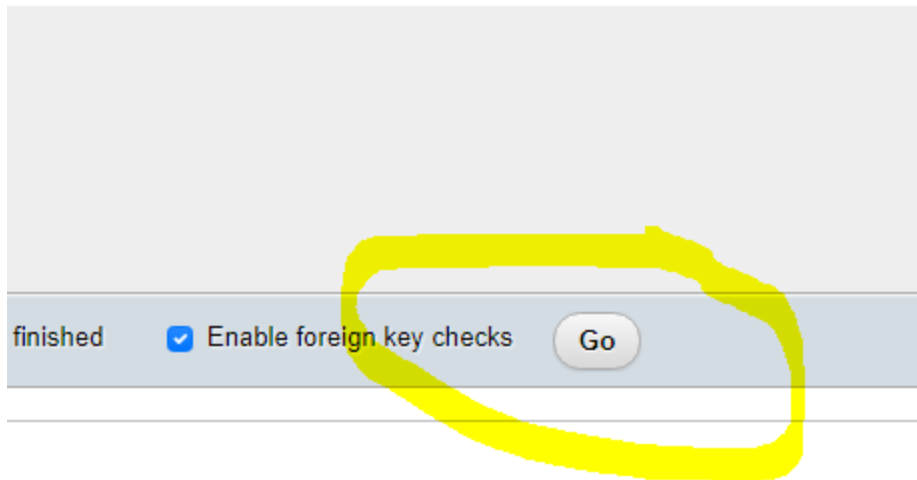

Open any browser and type "localhost/phpmyadmin" as shown below:-

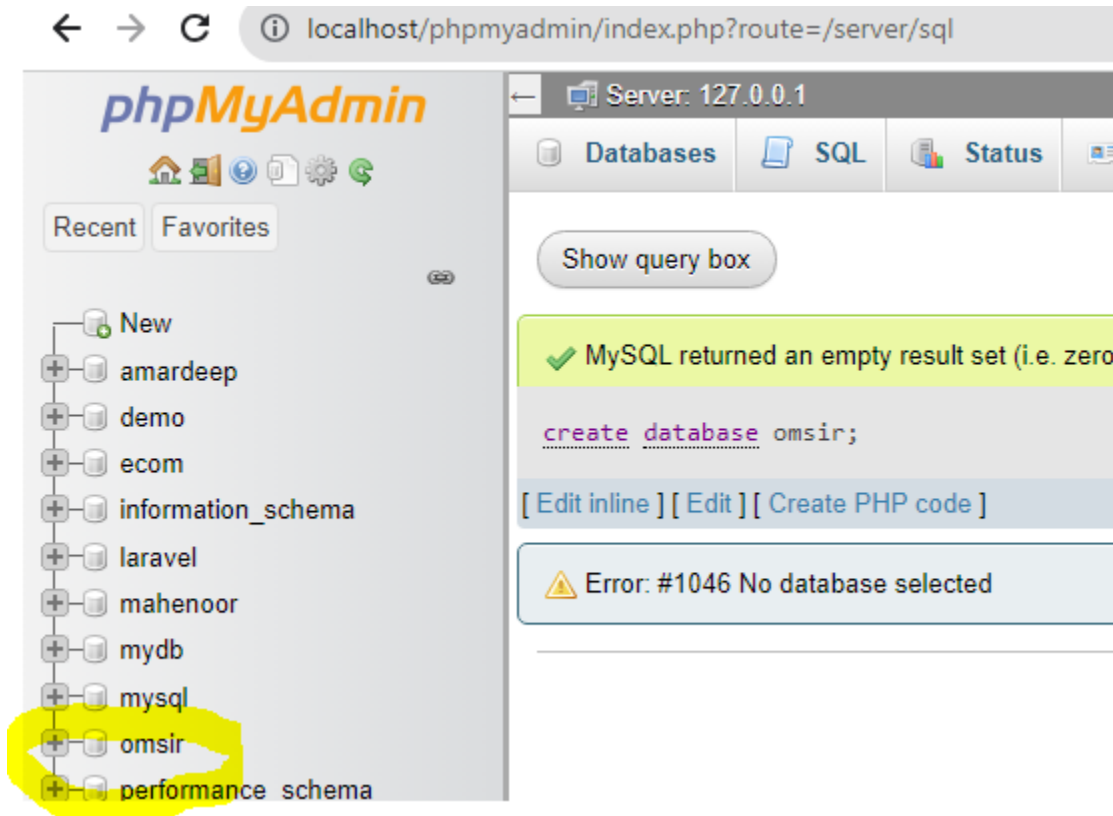

And click on SQL and type sql command "create database omsir;"

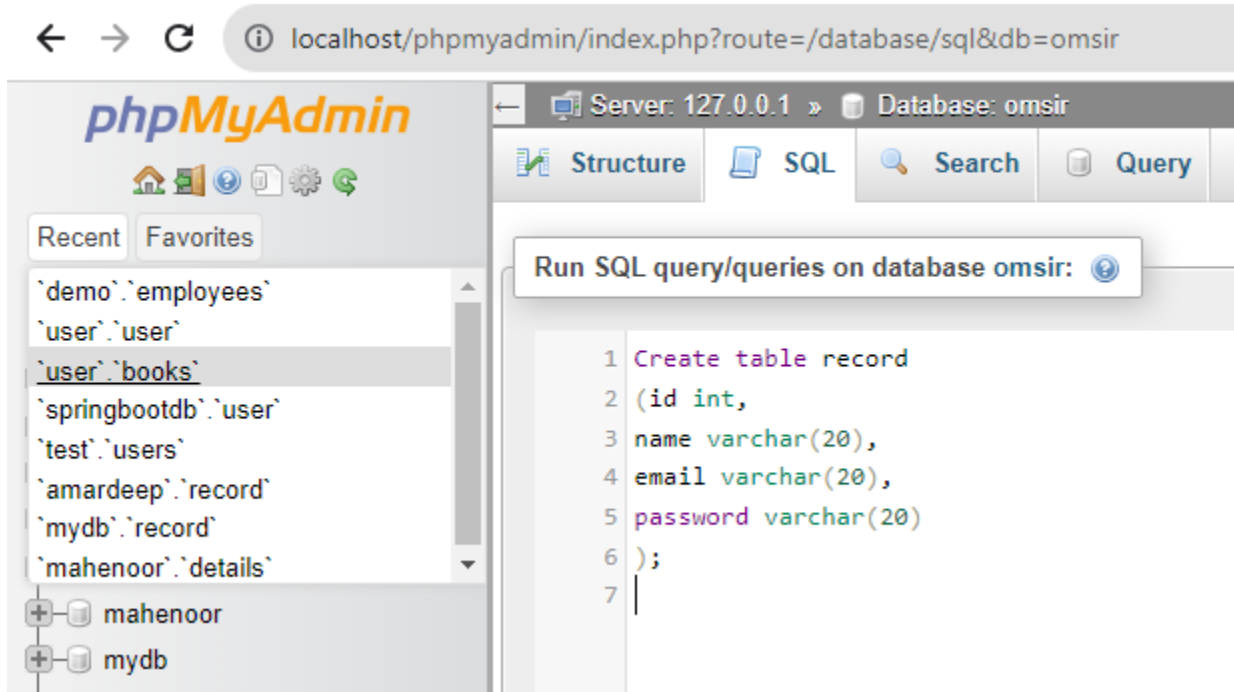

And click on Go. As shown below

And after it you will database will be created.

Now after it click on your database name and click on SQL

And click on Go

And you will see table will be created . as shown below.

And to insert record into table use following insert command:-

Server: 127.0.0.1 » Database: omsir » Table: record

Browse Structure SQL Search Insert Export

Run SQL query/queries on table omsir.record:

```
1 insert into record values ('101','om','om@gmail.com','ok@123');
```

and

finished Enable foreign key checks

And insert one more record

And click on Go.

Now to display record use command "select * from record";

And click on Go.

You will see your table

id	name	email	password
101	om	om@gmail.com	ok@123

Now to update record with update command as show below

← Server: 127.0.0.1 » Database: omsir » Table: record

Run SQL query/queries on table omsir.record: ?

```
1 update record set name='ram', email='ram@gmail.com', password='123' WHERE id='101';
```

And you will click on Go.

After it you will see output of table just run sql command "select * from record; "

id	name	email	password
101	ram	ram@gmail.com	123

Now to delete record :-

route=/table/sql&db=omsir&table=record

← Server: 127.0.0.1 » Database: omsir » Table: record

 Browse  Structure  SQL  Search  Ins

Run SQL query/queries on table omsir.record: 

```
1 delete from record where id ='101';|
```

And click on Go.
