

1)Step 1 create project folder :-

```
D:\>npx create-react-app om-react  
Creating a new React app in D:\om-react.  
Installing packages. This might take a couple of minutes.  
Installing react, react-dom, and react-scripts with cra-template...
```

Write code for `Contact.js` file code :-

```
import { useState } from "react";

export default function Contact() {
  const [contactForm, setContactForm] = useState({
    name: '',
    email: '',
    description: ''
  });

  const handleSubmit = (event) => {
    event.preventDefault();
    console.log(contactForm);
  }

  const handleChange = (event) => {
    setContactForm({
      ...contactForm,
      [event.target.name]: event.target.value
    });
  }

  return (
    <div>
      <h2 style={{ 'textAlign': 'center' }}>Contact Us</h2>
      <form onSubmit={handleSubmit} className="contact-form">
        <div className="form-control">
          <label htmlFor="name">Name: </label>
          <input
            type="text"
            id="name"
            name="name"
            value={contactForm.name}
            onChange={handleChange} />
        </div>
        <div className="form-control">
          <label htmlFor="email">Email: </label>
          <input
            type="email"
            id="email"
            name="email"
            value={contactForm.email}
            onChange={handleChange} />
        </div>
      </form>
    </div>
  );
}
```

```

        </div>
        <div className="form-control">
          <label htmlFor="description">Description: </label>
          <textarea
            id="description"
            name="description"
            value={contactForm.description}
            onChange={handleChange} />
        </div>
        <button className="btn btn-primary">Submit</button>
        <br />Form Values: {JSON.stringify(contactForm)}
      </form>
    </div>
  )
}

```

App.js file Code :-

```

import logo from './logo.svg';
import './App.css';
import Contact from './Contact';

function App() {
  return (
    <Contact/>
  );
}

export default App;

```

Run and see Output:-

localhost:3000

Name:

Email:

Description:

Form Values: {"name":"yom","email":"yom@gmail.com","description":"learn react form"}
